

Google Mini Training

Overview

The Google Mini is an integrated hardware and software solution designed to help your organisation by delivering the power and productivity of Google search across your documents and websites – quickly, easily and affordably. The Mini supports multiple document collections, incorporating over 220 different file formats, search across file servers and improved reporting.

The Google Mini Training Course is an instructor-led class with a mix of theory and practical labs covering all aspects of the Google Mini solution.

Note: We only offer private training classes with a minimum of 4 registered students.

Intended Audience

The class is targeted for people responsible for using, designing, deploying or administering a Google Mini solution in their organisation or looking to do so in the near future.
